1. Production Readiness Score ("Pripravenosť na produkciu")

- **Right now (without your .env secret keys file): ~15%**
    - Without the .env file, the app can only show public pages (Home, Features, Pricing, Legal pages, and Financial Calculators). Signing in, saving money records, AI tools, receipt scanning, and payments cannot run without your service keys.
- **Once you add the .env file with your service keys: ~82% – 85%**
    - All main features—tracking income and expenses, budgets, personal and group savings goals, voice input, receipt scanning, bank statement PDF imports, AI tips, and Stripe subscriptions—are fully built and working.
    - The remaining **15%–18%** is made up of a few "Coming Soon" tabs and unfinished buttons (listed in Section 3 below).

---

2. What I Found and Fixed For You

During the checkup, I found and fixed **22 real issues** that would have caused crashes, broken buttons, or security holes:

1. **Prevented the app from crashing on startup when keys are missing** (bunnyStorage.ts, groqClient.ts, uploadReceipt.ts, adminAuth.ts, ttsRoutes.ts): Previously, if cloud storage, receipt scanning, or voice keys were missing, the entire server crashed immediately instead of starting up cleanly.
2. **Closed a security loophole for free upgrades** (userRoutes.ts): Previously, anyone could send a request to switch their account to the **Premium** plan without paying. Now, upgrading to a paid plan strictly requires a real payment or promo code.
3. **Upgraded data protection (encryption) for user notes and descriptions** (encryption.ts): The app's privacy lock for transaction descriptions was using an outdated method that ignored its security key. It now uses modern, secure protection while still reading older saved records.
4. **Fixed Subscription Cancellation & Plan Schedule checks** (stripeRoutes.ts): Cancelling a subscription previously only marked the user as "Free" inside the app without telling Stripe to stop charging their card. Also fixed a bug where checking upcoming plan changes always failed.

5. **Fixed Voice Input & creating new categories by voice** (simple-voice-input.tsx, openai.ts): Fixed a bug where clicking "+ Create new category" inside the voice popup failed, added missing sign-in verification so voice recordings don't get rejected, and fixed a crash in the backup voice assistant.
6. **Fixed "Apply" button in Smart Auto-Categorization** (auto-categorization.tsx): Getting AI category suggestions worked, but clicking "Apply" or "Apply All" was sending the wrong command to the server and failing to save the category.
7. **Fixed Bank Statement Import saving** (importRoutes.ts, export.tsx): Fixed a bug where confirming imported bank statement transactions failed to save new categories and transactions, and fixed the checkboxes in the PDF preview list so you can select/deselect individual transactions.
8. **Fixed PDF Report generation & CSV Exports** (storage.ts, exportRoutes.ts): Added two missing data-fetching helpers needed by the Trends PDF report generator, and fixed a crash when exporting transactions to a CSV spreadsheet.
9. **Fixed Financial Courses exercise submission** (Courses.tsx): Submitting an exercise at the end of a lesson was failing because the address and action were swapped.
10. **Fixed Dashboard Delete Button & Receipt Refresh** (transaction-list.tsx, UploadReceiptModal.tsx): Connected the trash/delete button on the Dashboard for Premium users (it previously did nothing when clicked) and ensured the transaction list refreshes immediately after scanning a receipt.
11. **Fixed Broken Sign-In Links on Pricing & Subscribe Pages** (pricing.tsx, subscribe.tsx): Fixed buttons that sent logged-out visitors to a "Page Not Found" address instead of the sign-in screen.
12. **Fixed Smart Store Learning & AI Tips crashes** (merchantLearning.ts, merchantLookup.ts, learningRoutes.ts, aiRoutes.ts, collaborativeGoalRoutes.ts, categoryMatcher.ts): Fixed several behind-the-scenes math and variable errors so the app properly learns which category belongs to which store and doesn't crash when generating tips or sending group goal invites.

---

3. All App Functions: What Works vs. What is a Placeholder

✅ **Fully Working Features (Ready once .env keys are added)**

- **User Accounts & Languages** (auth-page.tsx, header.tsx)
    - Sign up, sign in, Multi-language support (English, Spanish, Slovak), and Currency switcher.
- **Dashboard Overview** (dashboard.tsx)
    - Monthly summary cards (Income, Expenses, Net Balance, Budget status), quick financial snapshot, and Financial Health Score.
- **Income, Expenses & Transactions Management** (transactions.tsx, income.tsx, expenses.tsx)
    - Adding, editing, deleting, searching, and filtering transactions by month, date, category, or recurring bills.
- **Custom Categories** (categories.tsx)
    - Creating, editing, and deleting custom income/expense categories with icons and colors.
- **Monthly Budgets** (budget.tsx)
    - Setting monthly spending limits per category, tracking progress bars, and navigating between months.
- **Personal Savings Goals** (goals.tsx)
    - Creating, editing, duplicating, and deleting personal financial goals with target dates and progress bars.
- **Group / Shared Savings Goals & Friends** (collaborative-goals.tsx, collaborative-goal-detail.tsx)
    - Adding friends by email, accepting/rejecting friend requests, creating shared goals, adding money contributions, and using the live group chat inside a goal. *(Note: The "Achievements" tab on the main Shared Goals page is a placeholder)*.
- **Bill & Payment Reminders** (transaction-reminders-widget.tsx, calendar.tsx)
    - Interactive monthly transaction calendar, automatic reminders for recurring bills, and manual bill reminders with payment links.
- **Voice Transaction Input** (simple-voice-input.tsx)
    - Speaking a transaction into the microphone (in English, Spanish, or Slovak), having AI fill out the amount, category, and description automatically, and saving it.

- **Receipt Photo Scanner & Mobile QR Upload** (UploadReceiptModal.tsx, sessionId.tsx)
    - Uploading a photo of a paper receipt from your computer—or scanning a QR code on your screen to snap a photo with your phone—to automatically read the store name, date, and total amount.
- **AI Financial Advisor & Predictions** (ai-financial-tips.tsx, contextual-financial-tips.tsx, daily-recommendations.tsx, expense-prediction.tsx, financial-health-mascot.tsx)
    - Personalized spending tips, future expense predictions, daily money habits, AI Financial Health Mascot, and Smart Auto-Categorization.
- **Bank Statement Import (PDF & CSV) & Cloud Backups** (export.tsx)
    - Uploading a PDF bank statement (automatically hides sensitive personal info, detects duplicates, and extracts transactions) or CSV/JSON files, plus backing up and restoring your data from the cloud.
- **Financial Courses & Calculators** (Courses.tsx, CalculatorModals.tsx)
    - Interactive financial lessons, quizzes/exercises with XP points and streaks, plus Expense & Debt Payoff calculators.
- **Subscriptions, Promo Codes, Help Chat & Contact Form** (subscribe.tsx, redeem.tsx, help.tsx, contact.tsx)
    - Upgrading/managing plans via Stripe, redeeming promo codes, live AI Help Center chat, and sending support emails.

⚠️ **Placeholders & Unfinished Features ("Coming Soon" or Mock Data)**

1. **"Export Data" Tab on the Export/Import Page** (export.tsx)
    - **Status**: **Placeholder ("Coming Soon")**. While the Import tab and Cloud Backup tab work, the first tab ("Export Data") shows checkboxes and format options, but instead of an Export button at the bottom, it displays a *"Coming Soon"* box. *(Note: Exporting a PDF report from the **Trends** page works!)*.
2. **Profile Page: "Notifications" and "Preferences" Tabs** (profile.tsx)
    - **Status**: **Placeholders**. The "Profile" and "Subscription" tabs work, but the "Notifications" and "Preferences" tabs only show static text

saying *"Notification settings will be managed here"* and *"App preferences will be managed here."*

3. **Shared Goals: "Achievements" Tab** (collaborative-goals.tsx)
    - **Status**: **Placeholder**. Shows a static *"No achievements yet"* box with no behind-the-scenes logic connected to it.
4. **Trends Page: Top Summary Cards ("Trend Direction" & "Volatility")** (trends.tsx)
    - **Status**: **Partially hardcoded**. All the charts, category breakdowns, AI forecasts, and PDF downloads on the Trends page use your real data, and the "Best Period" card is real—but the first two small summary cards at the top always say "Positive" and "Low".
5. **Reports Page: "Custom Date Range" Option** (reports.tsx)
    - **Status**: **Incomplete**. Filtering by Current Month, Last Month, Last 3 Months, Last 6 Months, and Current Year works, but choosing "Custom Range" from the dropdown does not show start/end date pickers and defaults to the current month.
6. **Admin Dashboard: "Analytics" Tab & Emergency Buttons** (admin-analytics.tsx)
    - **Status**: **Partially Placeholder**. User management, Clerk user sync, AI cache cleanup, AI usage stats, and Country Blocking all work. However, the 7th tab ("Analytics") is a *"Coming Soon"* box, and the 3 "Emergency API Control" buttons at the bottom of the AI Management tab have no actions attached when clicked.
7. **Header Menu: "Financial Courses" Link** (header.tsx)
    - **Status**: **Disabled in menu**. Even though the Financial Courses page (/courses) is built and working, the link to it inside the top-right user profile menu is currently grayed out with the label *"Soon available"*.
